## **CLAIMS**

- 1 1. A method for a network device to claim ownership of a disk in a network storage
- 2 system comprising the steps of:
- setting a first ownership attribute on the disk to a state of ownership by network
- 4 device; and
- setting a second ownership attribute on the disk to a state of ownership by net-
- 6 work device.
- 1 2. The method of claim 1, wherein one of the first ownership attribute and the sec-
- ond ownership attribute further comprises a small computer system interface level 3 per-
- 3 sistent reservation tag.
- 1 3. The method of claim 1, wherein one of the first ownership attribute and the sec-
- ond ownership attribute further comprises ownership information written on a predeter-
- mined area of the disk.
- 1 4. The method of claim 3, wherein the ownership information further comprises a
- 2 serial number of the network device.
- The method of claim 1, wherein the network device comprises a file server.
- 6. A method of claiming ownership of a disk by a network device in a network stor-
- 2 age system comprising the steps of:
- writing ownership information to a predetermined area of the disk; and
- setting a small computer system interface level 3 persistent reservation tag to a
- state of network device ownership.
- 7. The method of claim 6 wherein the ownership information further comprises a
- 2 serial number of a network device.

- 1 8. The method of claim 6, wherein the network device comprises a file server.
- 1 9. A network storage system comprising:
- a plurality of network devices;
- one or more switches, each network device connected to at least one of the one or
- 4 more switch; and
- a plurality of disks having a first ownership attribute and a second ownership at-
- tribute, each disk connected to at least one of the plurality of switches.
- 1 10. The network storage system of claim 9, wherein the first ownership attribute fur-
- ther comprises ownership information written on a predetermined area of the disk.
- 1 11. The network storage system of claim 9, wherein the second ownership attribute
- 2 further comprises a small computer system interface level 3 persistent reservation tag.
- 1 12. The networked storage system of claim 11, wherein each disk that is owned by
- the network device has the small computer system interface level 3 persistent reservation
- set such that only the network device may write to the disk.
- 1 13. The network storage system of claim 10, wherein the ownership information fur-
- ther comprises of a serial number of the network device that owns that particular disk.
- 1 14. The network storage system of claim 10, wherein each of the plurality of file
- 2 servers can read data from each of the plurality of disks.
- 1 15. The network storage system of claim 10, wherein only a network device that owns
- one of the plurality of disks can write data to the one disk.
  - 16. The network storage system of claim 9, wherein the network devices comprise
- 2 file servers.

1

- 1 17. A network storage system comprising:
- one or more switches;
- a plurality of disks; and
- a plurality of network devices, each of the network devices including means for
- claiming ownership of one of the plurality of disks in the network storage system.
- 1 18. The network storage system of claim 17, wherein the means for claiming owner-
- 2 ship further comprises:
- means for writing ownership information to a predetermined area of a disk; and
- means for setting a small computer system interface level 3 persistent reservation
- on a disk.
- 1 19. The network storage system of claim 17, wherein the network devices comprise
- 2 file servers.
- 1 20. A network storage system comprising:
- one or more switches interconnected to form a switching fabric;
- a plurality of disks, each of the disks connected to at least one of the switches; and
- one or more network devices, interconnected with the switching fabric, each of
- 5 the network devices being adapted to own a predetermined set of disks of the plurality of
- 6 disks.
- 1 21. The network storage system of claim 20, wherein the plurality of disks further
- 2 comprises a first ownership attribute and a second ownership attribute.
- 1 22. The network storage system of claim 21, wherein the first ownership attribute is
- 2 ownership information written to a predetermined area of each of the disks.
- 1 23. The network storage system of claim 22, wherein the ownership information fur-
- ther comprises a serial number of one of the one or more network devices.

2

- 1 24. The network storage system of claim 21, wherein the second ownership informa-
- 2 tion is a small computer system interface level 3 persistent reservation.
- 1 25. The network storage system of claim 20, wherein each of the network devices
- 2 further comprises a disk ownership table, the disk ownership table containing ownership
- data for each of the disks.
- 1 26. The network storage system of claim 25, wherein the ownership table further
- 2 comprises a world wide name for each of the disks, the world wide name being used for
- identification of each of the disks.
- 1 27. A computer-readable medium, including program instructions executing on net
  - work device, for performing the steps of:
- writing ownership information to a predetermined area of a disk; and
- setting a small computer system interface level 3 persistent reservation tag to a
- state of network device ownership.
